## PROFESSIONAL SUMMARY

Data and full-stack professional with enterprise experience at EY (Big 4) building ETL pipelines, cloud data infrastructure, and client-facing applications. Proficient in Python, SQL, Alteryx, Databricks, and Docker. Experienced in data integration, batch processing, database migration, and cloud-based data engineering workflows.

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                    |

| <b>Master of Computer Applications</b><br>Coimbatore Institute of Technology | 2024 – 2026<br>CGPA: 8.6 |
| <b>Bachelor of Computer Applications</b><br>PSG College of Arts & Science    | 2021 – 2024<br>CGPA: 7.9 |

## PROJECTS

### WasteLinkIt

- Built a full-stack web platform for sustainable waste management connecting producers and buyers. Integrated an **LSTM model** (TensorFlow) for demand prediction; used **MongoDB** and **Matplotlib** for visual analytics. Frontend built with HTML, CSS, and Bootstrap.

### EchoVerse

- Developed a real-time chat application for gaming communities using **Socket.io** (WebSockets), **Node.js**, **Express**, and **React**. Supported multiple chat rooms with live messaging.

### Virtual Super Market

- Built a full-stack e-commerce shopping cart system using the **MEAN stack** (MongoDB, Express, AngularJS, Node.js) with TypeScript, REST APIs, and JWT-based authentication for secure user sessions.

### You.Can.Code

- Designing an online collaborative coding platform for course uploads and programming practice, aimed at supporting peer-to-peer learning through structured content and practice tools.

CERTIFICATIONS

---

Oracle Database Associate – Oracle    |    Python & SQL – HackerRank (Gold)    |    NLP – Google Cloud    |    Data Visualization – Tata Forage    |    Generative AI – DeepLearning.AI    |    Azure Logic Apps – Microsoft

PARTICIPATIONS & ACTIVITIES

---

|                                                                                                     |                 |
|-----------------------------------------------------------------------------------------------------|-----------------|
| <b>HyperVerge SensAI Hackathon</b> – 30-hour onsite AI-focused hackathon                            | <b>May 2025</b> |
| <b>Ideathon</b> – Proposed a real-time public transport tracking system (ECEG – Easy Come, Easy Go) | <b>Oct 2024</b> |
| <b>Cryptera</b> – Full-day algorithmic problem-solving competition                                  | <b>Feb 2025</b> |

TECHNICAL SKILLS

---

- Languages:** Python, Java, JavaScript, TypeScript, SQL, Unix Shell Scripting
- Cloud & DevOps:** Azure Databricks, Azure Blob Storage, Azure Container Apps, Azure Logic Apps, Azure Data Factory, Docker, Keycloak, Snowflake.
- Big Data:** Hadoop, Hive (academic), PySpark (academic)
- Web & Frameworks:** React, Angular, Node.js, Express.js, Flask
- Databases:** MongoDB, MySQL, PostgreSQL
- Data & ML:** Pandas, NumPy, Matplotlib, TensorFlow, NLP, Power BI, ETL/ELT
- Tools:** Alteryx, Git, GitHub, Excel, REST APIs, Linux
